

PAGE ONE MARKER.

Synthetic page one introduces the chunk window and its measured overlap.

The second sentence keeps enough characters for several windows.

Window attribution must stay on the page where each chunk starts.

Continuation chunks repeat the configured overlap from the previous window.

Nothing on this page may appear in a page two locator.

PAGE TWO MARKER.

Synthetic page two text belongs to its own locator region.

A chunk starting here cites page two and never page one.

PAGE THREE MARKER.

Synthetic page three closes the fixture.
